Short stroke	8	12	16	20
Medium stroke	16	24	32	40
Long stroke	32	48	64	80

### Features

- Low profile design saves space and reduces bending moments, improved accuracy with smooth operation.
- Improved mounting repeatability, easy positioning for mounting.
- Double piston construction achieves compact design with strong gripping force.
- High rigidity and high precision with martensitic stainless steel.
- Grooves on the body for sensor switch to be inserted into.
- Magnetic as standard.

### Specification

Model	MCHD			
Acting type	Double acting			
Tube I.D. (mm)	8	12	16	20
Port size	M3×0.5	M5×0.8		
Medium	Air			
Operating pressure range	0.15~0.7	0.1~0.7 MPa		
Ambient temperature	-10~+60°C (No freezing)			
Repeatability	± 0.05 mm (*1)			
Max. operating frequency (c.p.m)	Short	120		
	Medium	120		
	Long	60		
Lubricator	Not required			
Sensor switch (*2)	2 wire	RDVE(V): Non-contact		
	3 wire	RNFE(V): NPN, RPFE(V): PNP		
Attached bolt	2 pcs	—		

\* 1. This is the value when no offset load is applied to the finger. When an offset load is applied to the finger, the maximum value is ±0.15mm due to the influence of backlash of the rack and pinion.

\* 2. R\*FE(V) specification, please refer to page 5-10.

### Model selection

Please select your model according to the weight of workpiece

- Although conditions differ according to the work piece shape and the coefficient of friction between the attachments and the workpiece, select a model that can provide a gripping force of 10 to 20 times the workpiece weight, or more.
- If high acceleration, deceleration or impact forces are encountered during motion, a further margin of safety should be considered.

When gripping a workpiece as in the figure as shown above:

**F**: Gripping force (N)

$\mu$ : Coefficient of friction between the attachments and the workpiece

**m**: Workpiece mass (kg)

**g**: Gravitational acceleration (=9.8m/s<sup>2</sup>)

**mg**: Workpiece weight (N)

the conditions under which the workpiece will not drop are,

$$2 \times \mu F > mg$$

Number of fingers

Therefore,

$$F > \frac{mg}{2 \times \mu}$$

With "a" representing the extra margin, "F" is determined by the following formula:

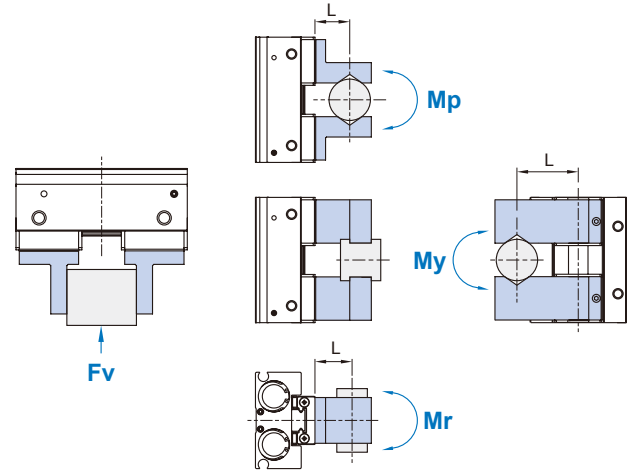

$$F = \frac{mg}{2 \times \mu} \times a$$

The "10 to 20 times or more of the workpiece weight" is calculated with a safety margin of a=4, which allows for impacts that occur during normal transportation, etc.

$\mu=0.2$	$\mu=0.1$
$F = \frac{mg}{2 \times 0.2} \times 4$	$F = \frac{mg}{2 \times 0.1} \times 4$
$= 10 \times mg$	$= 20 \times mg$
↓	↓
10×workpiece weight	20×workpiece weight

- \* 1. Even in cases where the coefficient of friction is greater than  $\mu=0.2$ , for reasons of safety, please select a gripping force which is at least 10 to 20 times greater than the workpiece weight.
- \* 2. If high acceleration, deceleration or impact forces are encountered during motion, a further margin of safety should be considered.

### Confirmation of external force on fingers

L: Distance to the point at which the load is applied (mm)

Tube I.D. (mm)	Allowable vertical load Fv(N)	Maximum allowable moment		
		Pitch moment Mp(N·m)	Yaw moment My(N·m)	Roll moment Mr(N·m)
8	58	0.26	0.26	0.53
12	98	0.68	0.68	1.4
16	176	1.4	1.4	2.8
20	294	2	2	4

\* Values for load and moment in the table indicate static values.

### Allowable load calculation

$$\text{Allowable load } F(N) = \frac{M(\text{maximum allowable moment})(N \cdot m)}{L(m)}$$

#### Example

When a static load of f=20N is operating, which applies pitch moment to point L=25mm from the MCHD-16 guide.

$$\begin{aligned} \text{Allowable load } F(N) &= \frac{1.4 (N \cdot m)}{25 \times 10^{-3} (m)} \\ &= 56 (N) \end{aligned}$$

Load f=20 (N) < 56 (N), so can be used.

### Model selection example

In the motion process did not produce high acceleration, deceleration or impact forces,  
 Workpiece mass: 300g, Gripping method: External gripping,  
 Operating pressure: 0.5 MPa, Coefficient of friction ( $\mu$ ): 0.1,  
 Holding position: 20mm (no overhang)

1. The conditions under which the workpiece will not drop are,

$$F = \frac{0.3}{2 \times 0.1} \times 4 = 6 \text{ (kgf)} \approx 60 \text{ (N)}$$

2. From Effective Gripping Force Fig,  
 Operating pressure: 0.5 MPa; Holding position: 20 mm  
 Effective gripping force is greater than 60 (N)  
 So selected **MCHD-16** grippers.

### Effective gripping force (Double acting)

Indication of effective force.

The effective gripping force shown in the graphs to the right is expressed as F, which is the thrust of one finger, when both fingers and attachments are in full contact with the workpiece as shown in the figure below.

1N=0.102 kgf  
1MPa=10.2 kgf/cm<sup>2</sup>

External grip

Internal grip

### Confirmation of gripping point

- The air gripper should be operated so that the workpiece gripping point "L" and the amount of overhang "H" stay within the range shown for each operating pressure given in the graphs.
- If the workpiece gripping point goes beyond the range limits, this will have an adverse effect on the life the air gripper.
